# High Speed CMOS Logic Analog Multiplexers/Demultiplexers

November 1997 - Revised April 1999

#### Features

- Wide Analog Input Voltage Range . . . . . . . ±5V Max
- · Low "On" Resistance
  - $70\Omega$  Typical (V<sub>CC</sub> V<sub>EE</sub> = 4.5V)
  - $40\Omega$  Typical (V<sub>CC</sub> V<sub>FF</sub> = 9V)
- Low Crosstalk between Switches
- Fast Switching and Propagation Speeds
- · "Break-Before-Make" Switching
- Wide Operating Temperature Range . . -55°C to 125°C
- CD54HC/CD74HC Types
  - Operation Control Voltage ......2V to 6V
     Switch Voltage ......0V to 10V
  - High Noise Immunity . . .  $N_{IL}$  = 30%,  $N_{IH}$  = 30% of  $V_{CC}$ ,  $V_{CC}$  = 5V
- CD54HCT/CD74HCT Types
  - Operation Control Voltage ...........4.5V to 5.5V

  - Direct LSTTL Input
    - Logic Compatibility ... V<sub>IL</sub> = 0.8V Max, V<sub>IH</sub> = 2V Min
  - CMOS Input Compatibility.....  $I_I \le 1\mu A$  at  $V_{OL}$ ,  $V_{OH}$

## Description

These devices are digitally controlled analog switches which utilize silicon gate CMOS technology to achieve operating speeds similar to LSTTL with the low power consumption of standard CMOS integrated circuits.

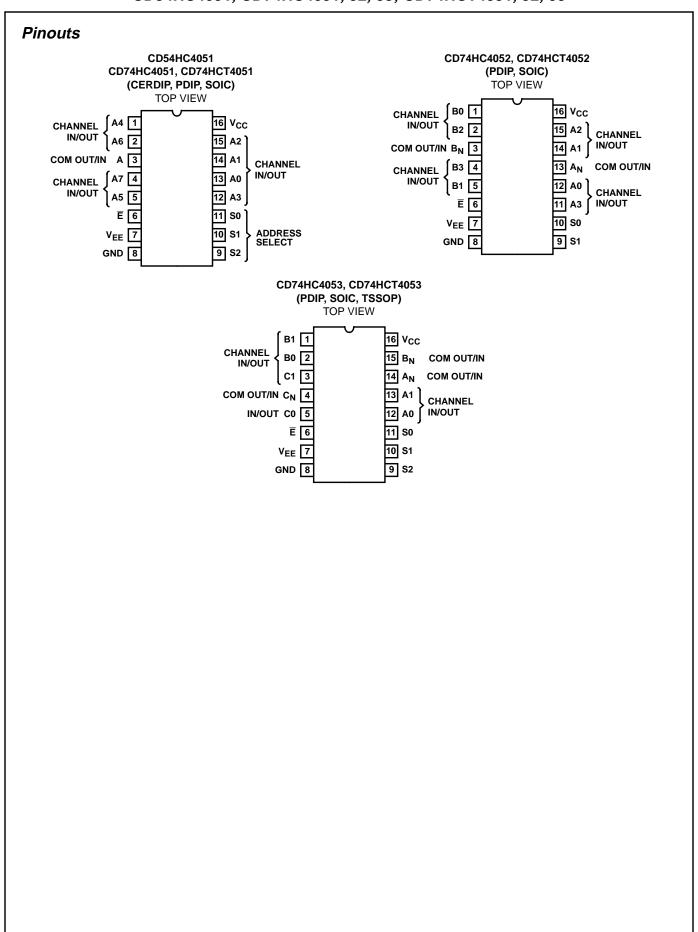

These analog multiplexers/demultiplexers control analog voltages that may vary across the voltage supply range (i.e. V<sub>CC</sub> to V<sub>EE</sub>). They are bidirectional switches thus allowing any analog input to be used as an output and visa-versa. The switches have low "on" resistance and low "off" leakages. In addition, all three devices have an enable control which, when high, disables all switches to their "off" state.

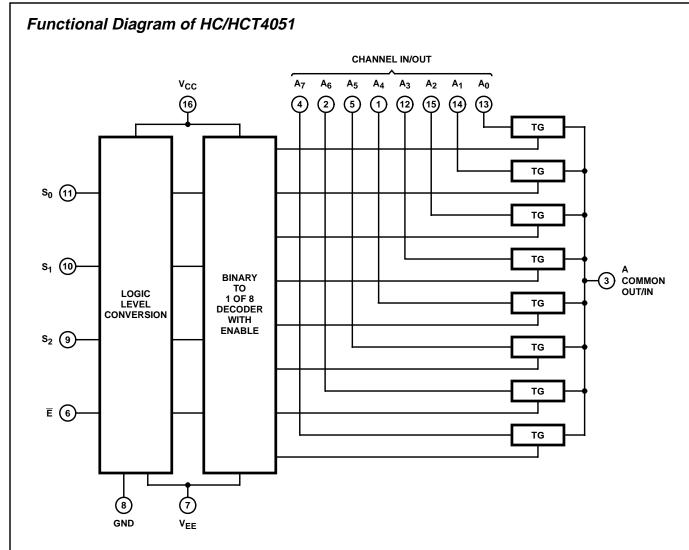

## Ordering Information

| PART NUMBER   | TEMP.<br>RANGE (°C) | PACKAGE      | PKG.<br>NO. |

#### NOTES:

- When ordering, use the entire part number. Add the suffix 96 to obtain the variant in the tape and reel. For the TSSOP package only, add the suffix R to obtain the variant in the tape and reel.
- Wafer or die is available which meets all electrical specifications.
   Please contact your local sales office or Harris customer service for ordering information.

## **Recommended Operating Conditions**

For maximum reliability, nominal operating conditions should be selected so that operation is always within the following ranges

| PARAMETER   | MIN             | MAX             | UNITS |
|---|-----------------|-----------------|-------|
| Supply Voltage Range (For T <sub>A</sub> = Full Package Temperature Range), V <sub>CC</sub> (Note 5) CD54/74HC Types                                  | 2               | 6               | V     |
| CD54/74HCT Types  | 4.5             | 5.5             | V     |
| Supply Voltage Range (For $T_A$ = Full Package Temperature Range), $V_{CC}$ - $V_{EE}$ CD54/74HC Types, CD54/74HCT Types (See Figure 1)               | 2               | 10              | V     |
| Supply Voltage Range (For T <sub>A</sub> = Full Package Temperature Range), V <sub>EE</sub> (Note 5) CD54/74HC Types, CD54/74HCT Types (See Figure 2) | 0               | -6              | V     |
| DC Input Control Voltage, V <sub>I</sub>  | GND             | V <sub>CC</sub> | V     |
| Analog Switch I/O Voltage, V <sub>IS</sub>  | V <sub>EE</sub> | Vcc             | V     |
| Operating Temperature, T <sub>A</sub>   | -55             | 125             | °C    |
| Input Rise and Fall Times, $t_r$ , $t_f$ 2V   | 0               | 1000            | ns    |
| 4.5V  | 0               | 500             | ns    |
| 6V  | 0               | 400             | ns    |

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

#### NOTES:

- 3. All voltages referenced to GND unless otherwise specified.
- 4.  $\theta_{\mbox{\scriptsize JA}}$  is measured with the component mounted on an evaluation PC board in free air.
- 5. In certain applications, the external load resistor current may include both V<sub>CC</sub> and signal line components. To avoid drawing V<sub>CC</sub> current when switch current flows into the transmission gate inputs, the voltage drop across the bidirectional switch must not exceed 0.6V (calculated from r<sub>ON</sub> values shown in Electrical Specifications table). No V<sub>CC</sub> current will flow through R<sub>L</sub> if the switch current flows into terminal 3 on the HC/HCT4051; terminals 3 and 13 on the HC/HCT4052; terminals 4, 14 and 15 on the HC/HCT4053.

#### NOTES:

- 6. For dual supply systems theoretical worst case ( $V_I = 2.4V$ ,  $V_{CC} = 5.5V$ ) specification is 1.8mA.
- 7. Any voltage between  $V_{\mbox{\footnotesize CC}}$  and GND.

## **HCT Input Loading Table**

| TYPE       | INPUT | UNIT LOADS<br>(NOTE) |
|------------|-------|----------------------|
| 4051, 4053 | All   | 0.5                  |
| 4052       | All   | 0.4                  |

NOTE: Unit load is  $\Delta I_{CC}$  limit specified in DC Specifications table, e.g., 360mA max. at 25°C.

# **Switching Specifications** $V_{CC} = 5V$ , $T_A = 25^{\circ}C$ , Input $t_r$ , $t_r = 6$ ns

#### NOTE:

8.  $C_{PD}$  is used to determine the dynamic power consumption, per package.  $P_D = C_{PD} \ V_{CC}^2 \ f_I + \Sigma \ (C_L + C_S) \ V_{CC}^2 \ f_O$   $f_O =$  output frequency

f<sub>I</sub> = input frequency

C<sub>L</sub> = output load capacitance
C<sub>S</sub> = switch capacitance
V<sub>CC</sub> = supply voltage

## **Switching Specifications** $C_L = 50pF$ , Input $t_r$ , $t_r = 6ns$

### NOTES:

- 9. Adjust input voltage to obtain 0dBm at  $V_{OS}$  for  $f_{IN}$  = 1MHz.
- 10.  $V_{IS}$  is centered at  $(V_{CC} V_{EE})/2$ .
- 11. Adjust input for 0dBm.
- 12. Not applicable for HC/HCT4051.

#### **IMPORTANT NOTICE**

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
